

Correction to Review Article “2025 Singapore consensus statements on the management of osteoporosis” [Ann Acad Med Singap 2026;55:252]

The authors would like to make 2 corrections in the publication of the [review article](#). The following are the corrected table and figure:

1. On page 255 (Table 2), the authors make the correction below on the definition of Very High Risk (VHR):

Original	Correction
Authors recommend defining a VHR category as follows: • Clinical: Presence of any of the following—recent fragility fracture in the last 1 year; history of multiple previous fragility fractures; more than 2 fragility fractures while on treatment; T-score $\leq$-3.0; high fall risk; or long-term use of bone-harming medications.	Authors recommend defining a VHR category as follows: • Clinical: Presence of any of the following—recent fragility fracture in the last 1 year; history of multiple previous fragility fractures; more than 2 fragility fractures while on treatment; T-score $\leq$-3.0; low BMD with high fall risk or long-term use of bone-harming medications.

2. On page 263 (Fig. 1), the authors make the same correction to the definition of VHR;

Original:

Very High Fracture Risk

- Clinical: Presence of any of the following—recent fragility fracture in the last 1 year, history of multiple previous fragility fractures, more than 2 fragility fractures while on treatment, T-score $\leq$ -3.0, high fall risk, or long-term use of bone-harming medications.

Correction:

Very High Fracture Risk

- Clinical: Presence of any of the following—recent fragility fracture in the last 1 year, history of multiple previous fragility fractures, more than 2 fragility fractures while on treatment, T-score $\leq$ -3.0, low BMD with high fall risk or long-term use of bone-harming medications.
