

Liver status^a	Cases (n=2844)	Controls (n=14,220)	Crude	Adjusted^b
	No. (%)	No. (%)	OR (95% CI)	OR (95% CI)
Non-NAFLD	2652 (93.3)	13,436 (94.5)	1.00	1.00
NAFLD	192 (6.8)	784 (5.5)	1.372 (1.125–1.673)	1.493 (1.214–1.836)

CI: confidence interval; NAFLD: non-alcoholic fatty liver disease; OR: odds ratio

^a NAFLD was defined as having fatty liver index (FLI) ≥ 60 , a fatty liver prediction model based on body mass index (BMI), waist circumference, triglyceride and γ glutamyl transferase. Non-NAFLD was defined as having FLI < 30.

^b Adjusted for age, gender, BMI, systolic blood pressure, diastolic blood pressure, fasting blood glucose, hypertension, diabetes mellitus, current smoking status and economic status.
